

Methods and Research Meetings 2010/2011*

Presentation on 22.02.2011

« **Recent developments in the sample survey methodology** »

Yves Tillé (Institut de statistique; UNINE)

Abstract :

We present a set of new statistical techniques that has recently been developed in the field of survey sampling theory. We particularly focus on sample selection, treatment of nonresponse, small area estimation, calibration. These innovations are put into perspective with the present mutations in official statistics: suppression of the censuses, use of registers. We discuss interest of these new technologies and their positive impact in the development of the survey methodology.

*Une série de séminaires organisée par **FORS** (Centre de compétences suisse en sciences sociales, Lausanne), **IMA** (Institut de mathématiques appliquées, UNIL) et **MISC** (Centre de recherche Méthodologie, inégalités et changement social, UNIL).
