SHP LIVES - Vaud, Waves 1-5

Abstract

The principal aim of the Swiss Household Panel (SHP) is to observe social change, in particular the dynamics of changing living conditions and representations in the population of Switzerland. Covering a broad range of topics and approaches in the social sciences, SHP is a yearly panel with rotating modules following three random samples of private households in Switzerland over time, interviewing all household members, mainly by telephone. SHP LIVES - Vaud can be essentially seen as an SHP oversample. Indeed, as the different waves of SHP and SHP LIVES - Vaud run in parallel, both surveys share most of the questions and modules. That said, SHP LIVES - Vaud is distinguished from SHP by a specific reference population: first, people and household coming exclusively from the canton of Vaud; second, facing a data lack about low income households and poverty trajectories, the Department of Health and Social Services of the canton of Vaud, decided to overrepresent low income households in the additional cantonal sample. In addition, a small set of SHP LIVES - Vaud questions are different, comparing to the SHP; some were added, some other were slightly modified to better comply to the specific lived experience of the studied population (see below).

Data Collector: M.I.S. Trend

Producers (alphabetical order): FORS, NCCR LIVES.

Keywords: Living conditions, poverty, life calendar, households, Swiss Household Panel, Canton of Vaud.

Population and sample procedure

Target Population: Households and individuals residing in the canton of Vaud.

Sampling Procedure: The sample of selected households is representative of the target population. It is stratified according to tax data (households with a low income are overrepresented). At the individual level, all individuals of the selected household were invited to respond to the individual part of the study.
