Part II Coding decisions biographical data

All domain files only contain respondents who provided information on the specific domain.

1. Living arrangements file (SHPIII_LA_user)

- In the calendar there were separate categories for friend, other, halfsibling and sibling. This led to too many categories. We combined friend with other and halfsibling with sibling.
- The end of an episode was cut off at January 1.
 - o As a consequence episodes that lasted less than a year (only mentioned in one year) were left out.
 - o Also, episodes that started in the last year in the calendar (2013) are not in the data.
 - o Most respondents report the end of one episode and the start of the next in the same year. With this cutoff we avoid any overlap. However, for those who report the end and start in consecutive years, the cutoff point at January 1 creates a hole in the data. When there was a hole of one year in the data, the previous episode was extended with one year. If there is a hole in the data that lasts more than one year, it is left empty.
- All occurrences of "living alone" in parallel with living with other relationships were deleted.

2. Family events file (SHPIII_FA_user)

- Information mentioned by respondents under "other family event" were recoded as much as possible into separate categories. In 21 cases the information was unclear and hence not further specified in the data (e.g. "death Stefan").

3. Partner relationships and civil status file (SHPIII_CS_user)

- Relationships that started and ended in the same year were disregarded.
- Relationships can overlap.
- One episode refers to one relationship. In each relationship row are civil status changes that took place in the same period, or that are clearly associated with the relationship in question. For example, divorce (or widowhood) may have taken place after a relationship ended; it is still included with the original relationship. In cases for which it was not clear the change in civil status was kept in the relationship episode during which it occurred.
- Civil status changes that took place after the last relationship ended were kept with the last relationship. In the far majority of cases this concerned legal divorces after separation; in a few of cases it concerned a new marriage, when no new relationship was mentioned.
- A few respondents mentioned divorce as the first civil status change. We do not have a date of marriage for them.
- Most respondents interpreted separation as the ending of any relationship, not necessarily after marriage or registered partnership. So separation cannot be interpreted as a change in civil status.

- A few individuals reported two relationships at the same time at least once. This information is kept in the data (there is overlap between the episodes for these individuals).
- Names were changed into a, b, c, etc. We assumed that when a respondent mentioned the same name or initial in several relationship episodes, it referred to same person.

4. Residence file (SHPIII_RE_user)

- Episodes shorter than a year were kept in the data (same start and end year).
- For people for whom there was only information on the canton of residence, and not on the commune, we computed the moving information at the cantonal level. It concerns very few cases (0.8% of the episodes).

5. Professional activity file (SHPIII_PROF_ACT_user)

- The end of an episode was cut off at January 1.
 - o As a consequence, episodes that lasted less than a year (only mentioned in one year) were left out.
 - o Also, episodes that started in the last year in the calendar (2013) are not in the data.
 - o Most respondents report the end of one episode and the start of the next in the same year. With this cutoff we avoid any overlap. However, for those who report the end and start in consecutive years, the cutoff point at January 1 creates a hole in the data. When there was a hole of one year in the data, the previous episode was extended with one year. If there is a hole in the data that lasts more than one year, it is left empty.
- Occurrences of inactive in combination with employment or social help were coded as employment or social help only (inactive was deleted).
- In several cases there was information on job size, but not on the job. We kept this information.
- There were a few cases of retired respondents in combination with fulltime working. We kept this information.
- In some cases, individuals mentioned a temporary job, volunteer work or an internship. Although the goal of the domain Professional Activity was to have information on paid work, we kept this information.

6. Health file (SHPIII_HEA_user)

- Episodes shorter than a year were kept in the data (same start and end year).
